

5.3 Lean production and quality management (HL)

Terminology exercise

Check that you understand the terminology used in this subtopic by dragging the correct word into each space.

It is important that businesses produce products efficiently and with high quality. The term _____ refers to a set of strategies aimed at reducing _____ in the production process. Businesses strive to increase _____, which defines how well a business can transform physical, human and financial inputs into outputs. Improved efficiency reduces _____ of production.

One way to reduce waste involves businesses holding regular, scheduled meetings in which staff are invited to give their opinions and to suggest improvements. This strategy is called _____, or continuous improvement. Another strategy, known as _____ production, involves delivering resources and stock shortly before they are needed for production. This lowers the cost and space needed for stock.
